Tree of Thoughts: Deliberate Problem Solving with Large Language Models

<□ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □

# Overview

- 1. Input-Output (IO) Prompting:  $y \sim p_{\theta}^{\rm IO}(y|x)$
- 2. Chain-of-Thought(CoT) Prompting: introduce a chain of thought  $z_1, \dots, z_n$  where each thought  $z_i$  is sequentially sampled  $z_i \sim p_{\theta}^{\text{CoT}}(y|x, z_1 \dots i-1)$  to serve as a meaningful intermediate step to reach  $y \sim p_{\theta}^{\text{CoT}}(y|x, z_1 \dots n)$ .
- 3. Self-consistency with CoT (CoT-SC): k i.i.d. samples  $[z_{1\cdots n}^{(i)}, y^{(i)}] \sim p_{\theta}^{\text{CoT}}(z_{1\cdots n}, y|x)$ , and return most frequent output  $\arg \max_{y} \#\{i|y^{(i)} = y\}$ .

Figure 1: Illustration of various approaches in problem solving

ToT frames a problem as a search over tree, where each node of a tree is a state  $s = [x, z_1...i]$  or partial solution to the problem.

### 1. Thought decomposition

Unlike CoT, which sequentially sample thoughts without explicit decomposition, ToT design problem-specific decomposition.

	Game of 24	Creative Writing	5x5 Crosswords
Input	4 numbers (4 9 10 13)	4 random sentences	10 clues (h1. presented; )
Output	An equation to reach 24 (13-9)*(10-4)=24	A passage of 4 paragraphs ending in the 4 sentences	5x5 letters: SHOWN; WIRRA; AVAIL;
Thoughts	3 intermediate equations (13-9=4 (left 4,4,10); 10- 4=6 (left 4,6); 4*6=24)	A short writing plan (1. Introduce a book that connects)	Words to fill in for clues: (h1. shown; v5. naled;)
#ToT steps	3	1	5-10 (variable)

Figure 2: Task overview

### 2. Thought generator $G(p_{\theta}, s, k)$

- Sample: k i.i.d. samples  $z^{(j)} \sim p_{\theta}^{\mathsf{CoT}}(z_{i+1}|s)$ 
  - Good when search space is rich
  - ex. Creative writing
- Propose: generate thoughts sequentially using "propose prompt"

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 のへで 5/19

- Good when search space is constrained
- ex. Crosswords, Game of 24

### **3.** State evaluator $V(p_{\theta}, S)$

Use LLM  $p_{\theta}$  (mulitple times) to reason about the state s

- ► Value:  $V(p_{\theta}, S)(s) \sim p_{\theta}^{\mathsf{value}}(v|s)$ 
  - score : scalar value or classification (ex. sure/likely/impossible)

◆□ ▶ < 圖 ▶ < 圖 ▶ < 圖 ▶ < 圖 • ○ ○ ○ 6/19</p>

- few lookahead simulation and commonsense
- ▶ Vote:  $V(p_{\theta},S)(s) = \mathbb{1}[s=s^{\star}]$ , where "good" state  $s^{\star} = p_{\theta}^{\text{vote}}(s^{\star}|S)$

Use when direct evaluation is hard

similar to multi-step self-consistency strategy

#### 4. Search algorithm

1. Breadth-first search

< □ > < □ > < □ > < Ξ > < Ξ > Ξ · ⑦ Q @ 7/19

2. Depth-first search

## Tree Search Algorithms

#### Breadth-First Search (BFS)

```
def BFS(G: graph, V0: root, Vt: target):
Q = Queue()
Q.append(V0)
V0.visited = True
while len(Q) != 0:
    V = Q.dequeue()
    V.visitied = True
    if V == Vt:
        return
    else:
        for v in V.children():
            if not v.visited:
                Q.enqueue(v)
```

## Tree Search Algorithms

### Depth-First Search (DFS)

```
def DFS(G: graph, V: root, Vt: target):
V.visited = True
if V == Vt:
    return
else:
    for v in V.children():
        if not v.visited:
        DFS(G, v, Vt)
```

### Algorithm 1 ToT-BFS

#### 1: **Given:**

Input x, LLM  $p_{\theta}$ , thought generator G, size limit k, state evaluator V, step limit T, breadth limit b 2:  $S_0 \leftarrow \{x\}$ 3: for  $t = 0, 1, \dots, T$  do 4:  $S'_t \leftarrow \{[s, z] | s \in S_{t-1}, z_t \in G(p_{\theta}, s, k)\} \triangleright k * b$  candidates 5:  $V_t \leftarrow V(p_{\theta}, S'_t)$ 6:  $S_t \leftarrow \arg \max_{S \subset S'_t, |S| = b} \sum_{s \in S} V_t(s) \triangleright b$  candidates 7: end for 8: return  $G(p_{\theta}, \arg \max_{s \in S_T} V_T(s), 1)$ 

◆□▶ ◆□▶ ◆ □▶ ◆ □ ▶ ○ ○ ○ ○ 10/19

#### Algorithm 2 ToT-DFS

1: **Given:** 

Current state s, step t, LLM  $p_{\theta}$ , thought generator G, size limit k, state evaluator V, step limit T, threshold  $v_{\text{th}}$ 

- 2: if t > T then record  $G(p_{\theta}, s, 1)$
- 3: end if
- 4: for  $s' \in G(p_{\theta}, s, k)$  do
- 5: **if**  $V_{\theta}$ ,  $\{s'\}$ ) $(s) > v_{\text{th}}$  **then** DFS(s', t+1)  $\triangleright$  check plausibility

<ロト < @ ト < 三 ト < 三 ト 三 の へ C 11/19

- 6: end if
- 7: end for

### Benefits

- Generality: previous methods are special case of ToT
- Modularity: each modularized compartment (thought decomp, thought gen, state eval, search alg) can be modified individually

▲□▶ ▲□▶ ▲ 三▶ ▲ 三▶ 三三 - のへで 12/19

- Adaptability: different problem settings, LMs, resource constraint can be used
- Convenience: no extra training

**Game of 24:** use given 4 numbers to obtain 24 with basic arithmetic operations (ex. (10 - 4) \* (13 - 9) = 24)

Figure 3: Game of 24

- Thought decomposition: 3 steps
- Thought generator: "propose" prompt
- State evaluator: LLM evaluate each thought as sure/maybe/impossible
- Search algorithm: BFS

#### Game of 24

#### Figure 4: Game of 24 results

<□ ▶ < □ ▶ < 三 ▶ < 三 ▶ 三 の Q ℃ 14/19

# **Creative writing:** write 4 short paragraphs where each ends with one of the given 4 sentences.

Figure 5: Creative writing

- Thought decomposition: 2 steps
- Thought generator: sample k plans
- State evaluator: LLM voting
- Search algorithm: BFS

### **Creative writing**

Figure 6: Creative writing results

#### Evaluation

► GPT-4: make GPT-4 to give 5 independent 1~10 scalar scores, and report average

► Human: empoly authors to judge between two outputs Refine: iteratively ask LLM to refine the passage if it is not perfectly coherent.

### Mini crosswords: 5×5 mini crosswords

Figure 7: Mini crosswords

- Thought decomposition: at most 10 steps
- Thought generator: "propose" prompt to come up with candidates and its confidence level
- State evaluator: LLM evaluate whether each proposal or not
- Search algorithm: DFS

#### Mini crosswords

Method	Succe	ess Ra	te (%)
	Letter	r Word	Game
IO	38.7	14	0
CoT	40.6	15.6	1
ToT (ours)	<b>78</b>	<b>60</b>	<b>20</b>
+best state	82.4	67.5	35
-prune	65.4	41.5	5
-backtrack	54.6	20	5
